

Curiosity turns pages into memories

A small demo PDF with selectable text, images and preserved layout

Curiosity is not a distraction from learning. It is the tiny force that makes a reader pause, notice an unfamiliar word, and ask what it means in this exact sentence. When context stays attached to a new word, memory gains a story instead of a definition alone. A bank beside a river is different from a bank in the city, even though the spelling is identical. That difference is why Wordinary saves the sentence, the page, and the moment where the word first became interesting.

W

Try this

Select “curiosity”, “context”, or “bank” directly on this page.

The visual page remains intact while the invisible text layer stays selectable.

The same word, three different scenes

light

The morning light entered through the window.

light

This suitcase is surprisingly light.

light

Please light the candle before dinner.

A useful flashcard should remember more than a translation. It should remember the source page, nearby sentence, visual clue, and every other place where the learner met the word. In PDF Lab, clicking a saved term can reveal each page that contains it. This makes vocabulary review feel less like a list and more like revisiting a document.
